

# Introducing

# Database-To-Host File Download

Create a file by extracting records from database and send to your customer/partner

*D2H (Database-to-Host) is a solution that facilitates seamless communication between databases and host systems. It enables a wide variety of interfaces for pulling or pushing data, catering to various business use cases. Whether you need to retrieve information from the database or send data to it, D2H streamlines the process, ensuring efficient data exchange.*

## Salient Features

- ✓ Create File In Specific Format By Extracting Data From Database
- ✓ Transfer The Output File To Target Server For Further Processing
- ✓ Data Integrity Check
- ✓ Auto DR Switch-Over Compliance
- ✓ Activity Chaining For Further Action On File
- ✓ Can Be Integrated With Beehive Integrator For Advance Processing On Data

## Authentication/Encryption

- ✓ Monitoring file transfer activity
- ✓ Define Data-Encryption-At-Rest Policy
- ✓ Database Support
  - MYSQL
  - SQL SERVER
  - ORACLE

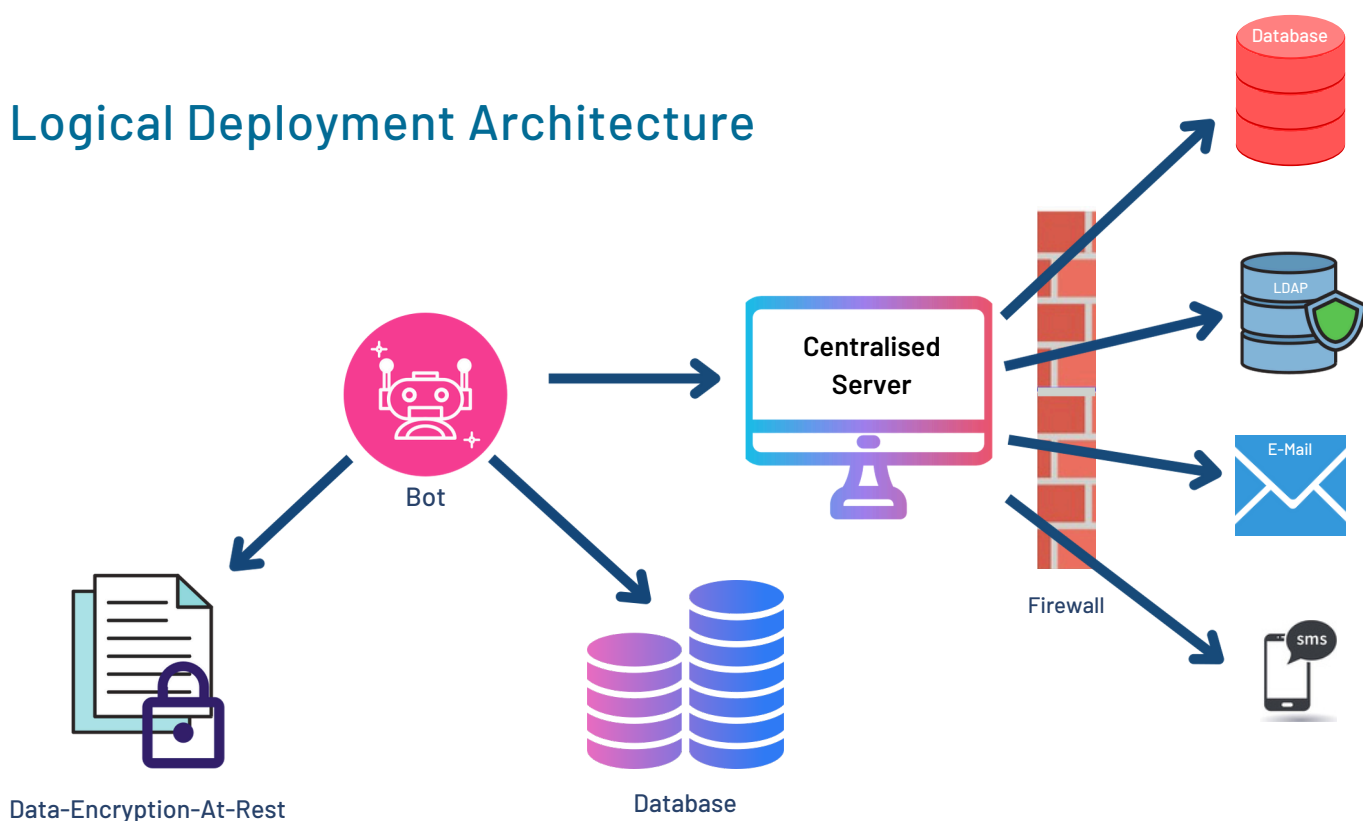

## Configuration

- ✓ Can Define Multiple Formats For Output File
  - CSV
  - XLS
  - PDF
  - TXT
  - Fixed Length
  - Word (DOC File)
- ✓ Data Enrichment
- ✓ Scheduled Extraction Of File From Database

## Alerts & Notifications

- ✓ Email
- ✓ SMS

## Logical Deployment Architecture
