E2H

E2H (Email-to-Host) bridges email communication and host systems. It extracts data from incoming emails, monitors specified subjects, and processes attachments. E2H is valuable for scenarios where seamless data flow between email and backend systems is essential, enabling automated data ingestion and efficient handling of attachments.

Salient Features

✔ Pattern Based Auto Fetching Of Emails

✔ Save attachments as well as mail body content in a file

✔ Compression of attachments for storage on disk

✔ Dashboard To Monitor File Transfer Activity

✔ Auto DR Switch-Over Compliance

✔ Activity Chaining For Follow-Up Action On File

✔ Define Email Classification Patterns

✔ Antivirus Check Of Content

✔ Can Be Integrated With Beehive Integrator For Advance Processing On Data

Classification Patterns

- Equals
- Not Equals
- Begins With
- Ends With
- Contains
- Does Not Contain

Configuration

✓ Define Data-Encryption-At-Rest Policy

✓ Configurable POP3/IMAP Server

✓ Scheduled Scanning Of File From Emai

✓ Integration With Antivirus

## Notifications & Alerts

✓ Email

✓ SMS

Authentication

Hybrid Email Authentication

✓ LTS

✓ SSL

✓ None
