

Introducing

Host-To-Email File Upload

File delivered to your customers, partners & suppliers via e-mail

H2E (Host-to-Email) bridges the gap between host systems and email communication. It enables seamless file distribution to partners via email, allowing for customization of subject lines and email bodies. H2E allows you to create emails with personalized subject lines and body content. You can integrate dynamic information into the email, tailoring it to specific recipients or use cases. Additionally, H2E facilitates attaching files to these customized emails, making it valuable for scenarios where automated communication with partners is essential, such as sending invoices, reports, or notifications to clients, suppliers, or stakeholders.

Salient Features

- ✓ Notify If File Not Available
- ✓ Auto DR Switch-Over Compliance
- ✓ Activity Chaining For Follow-Up Action On File
- ✓ Monitor For New File (Attachment) To Be Sent
- ✓ Send Files To Multiple Recipients As Attachment As Per Rule
- ✓ Compare Subject/Mail Body As Per Rule
- ✓ Can Be Integrated With Beehive Integrator For Advance Processing

Alerts & Notifications

- ✓ Email
- ✓ SMS

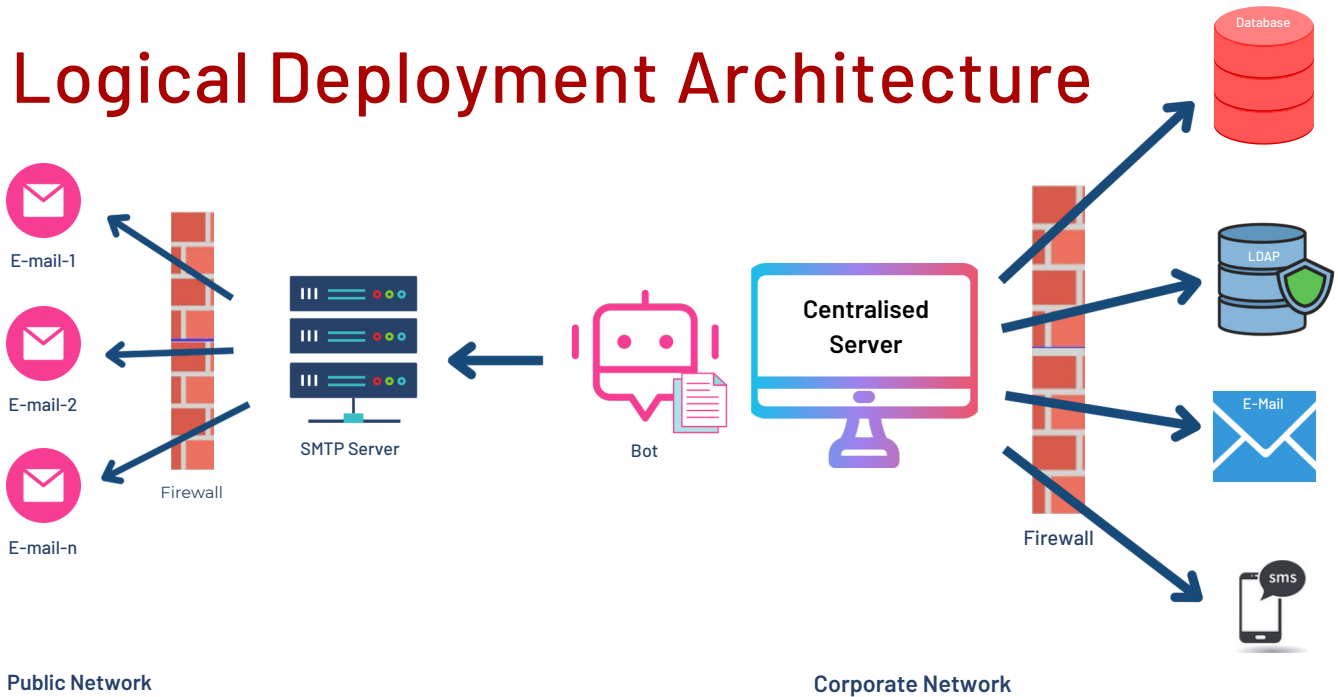

Configuration

- ✓ Dynamic Subject Configuration
- ✓ Multiple Recipient Configuration
- ✓ Mail Body Configuration
- ✓ Integration With Antivirus
- ✓ SMTP Configuration
- ✓ Scheduled File Sending On Email

Authentication/Encryption

- ✓ Hybrid Email Authentication
 - TLS
 - SSL
 - None
- ✓ Password/AD Authentication
- ✓ Encryption Of File Before Sending

Logical Deployment Architecture
