

HOST-TO-HOST VIRUS CHECKER

Your Shield Against Digital Threats

The H2H Virus Checker module is an integral part of Xfer4Sure, designed to ensure the security of every incoming and outgoing file to your organization. With its seamless integration capabilities and extensive features, it offers robust protection against malicious threats.

SALIENT FEATURES

- ✔ Guarantees thorough scanning of every file entering or leaving the organization
- ✔ An intuitive dashboard and straightforward configuration makes it easy to manage
- ✔ Automated alerts and blacklisting ensure swift action against threats
- ✔ Advanced analytics provides actionable insights, enhancing overall security posture
- ✔ Easily integrates with other Xfer4Sure modules like H2H, H2D, E2H, WebPortal, Secure Partner, and more
- ✔ Maintains a comprehensive record of all scanned files in the database for transparency and tracking
- ✔ Admin users can define policies for purging quarantined files
- ✔ Admin users can set rules for determining file types for mandatory scanning

SAFE. RELIABLE. FAST.
